BUS 310,	Exam	#1E,	Part III	, Spring	2019
----------	------	------	----------	----------	------

Name	KE	1
Section	,	

Instructions: This exam is in three parts: Part I is to be completed partly at home using the materials posted on Blackboard for Part I and you will answer questions about that work in class below; Part II is to be completed entirely in class using your computer. Part III is to be done entirely in class without your computer.

- 1. You may not use cell phones, and you may only access internet resources you are specifically directed to use: You may access your data file for Part I of the exam in Blackboard. You may access the data files posted to Blackboard for the Exam part II, but not for Part III.
- 2. It is a violation of the honor code to communicate with other students in or out of the class during the exam, by any means. Students whose exams show evidence of coordination will be reported.
- 3. Show all work to support your reasoning. Primarily, this can be done in Excel. Deletion of evidence of your logical process can result in loss of credit. A significant amount of credit goes toward process, reasoning and interpretation.
- 4. When rounding, do not over-round. In general, do not report dollar amounts beyond the penny. Means should be rounded to one digit more than the original data; standard deviations to two digits more. Do not report fractions rounded to single digit expressions:  $\frac{131}{256} \neq \frac{1}{2}$ , and do not round decimals or percents to a single digit: 0.57846 ...  $\neq$  60% or 0.6. Report a minimum of two digits, up to four, unless otherwise specified in the problem.
- 5. If a problem asks for an explanation, state the solution clearly, then interpret or explain in addition to stating the solution, not in place of. Explanations without solutions, just as solutions without explanations, will not be awarded full credit.

## Part I: At Home

This part was completed at home. You can upload the Excel file for Part I to the Part I folder in Blackboard for use during the Exam period. However, this submission will not be graded in this location, it must be submitted to the "to be graded folder" to receive credit.

Part II: In Class (with computer)

Before completing Part III, complete Part II in class. Return the paper to your instructor and put away your computer. Then pick up Part III.

Part III: In Class (without domputer)

- 1. You may use a handheld calculator for this portion of the exam. Any calculator is fine, as long as it is not on a device that connects to the Internet. That means, you may not use the calculator on your phone or smart watch. You may also not share calculators with another student taking the exam at the same time.
- 2. This is Exam E.
- 3. Answer the questions on the paper exam. Sign the honor code statement on the next page.
- 4. Turn in your paper copy of the exam to your instructor. Your instructor will attach this portion of the exam to the version of Part II that you submitted previously.

				1 .							

 What is the final maximum profit for planting 83.3 acres of oats, and 16.7 acres of corn? (4 points)

\$6933.33

2. What is the shadow price for the Capital constraint? What does it mean in the context of the problem? (6 points)

1.11

if you increase the value of the Constraints by 1,
then the profit (revenue) increases by \$1.11.

3. What does it mean for a linear programming problem to be infeasible? (6 points)

all the constraints can't be satisfied at the same time.

Below you will find a screenshot of the relevant Excel data for a difference of means problem. Use this information to answer the questions that follow.

	A	\ B	Ċ	D	
V	Pair	Male	Female	Difference: Male	- Female
4	40	\$29,752	\$29,188		\$564
42	41	\$30,414	\$30,095	1	\$319
43	42	\$25,795	\$25,248		\$547
44	43	\$27,944	\$27,673		\$271
45	44	\$26,661	\$26,212		\$449
46	45	\$31,351	\$30,783		\$568
47	46	\$29,303	\$28,519		\$784

49	48	\$24,524	\$24,114		\$410
50	49	\$27,217	\$26,282		\$935
51	50	\$21,651	\$21,153		\$498
52	Mean	\$27,241	\$26,944		\$297
53	St.Dev.	\$2,536.45	\$2,548.50	\$	297.87
54					
55	T-Score	Confidence	Level	Standard Error	
56	2.009575	95%		\$	42.13
57					

4. Is the data dependent or independent? Explain what leads you to this conclusion. (6 points)

dependent

paired data

5. Use the information provided to calculate the 95% confidence interval. (6 points)

mean ± t-score \$ st. enor (212.34, 381.66)

6. Does the interval you calculated support the claim that men make more than women? Why or why not? (6 points)

yes, since the interval of defferences does not contain zero Use the data in the table below to answer the guestions that follow.

Preference	Count	Proportion
R	181	45.25%
N	29	7.25%
L	190	47.50%
Z-Scores	Confide	ence Levels
1.150	Marie Carlotter Communication	75%
1.282		80%
1.645		90%
1.960		95%
2.576	HOTO DE TOMA A PARTICI	99%

St. enor =  

$$\sqrt{p(1-p)} = \sqrt{1.681 \times 10^{-4}}$$

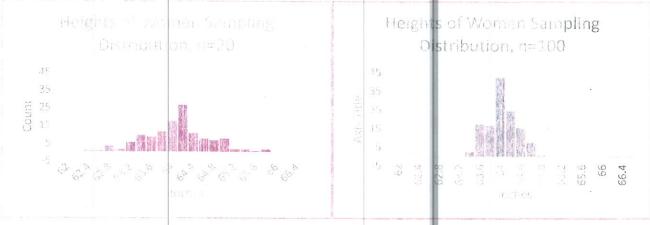

7. Use the data provided to find the margin of error for the 90% confidence interval for those that prefer N. (5 points)

8. Use the data provided to find the margin of error for the 99% confidence interval for those that prefer N. (5 points)

9. What do you notice about the margin of error as the confidence level increases? (5 points)

it gets larger

Use the information below to answer the questions that follow.

Sample Size	Standard Error	Mean
n=20	0.6658	64.05
n=100	0.2924	64.03
n=1	3.1	64

10. Explain how the information above supports the claims of the Central Limit Theorem. Be as thorough as possible. (6 points)

the mean centers around the true value
the spread of the means gets smaller w/ larger
Samples according to formula & Tri

11. Describe a scenario is which a systematic sample would be a more appropriate choice than a simple random sample. (6 points)

specially of already rather andonized

12. What is a measurement error? How does it produce excess bias in a sample? (6 points)

an euror in userig equipment, recording responses a otherwise measuring data. Could be a mis calibrated prece g equipment will skew data in one direction

13. Why does confidentiality reduce untruthful responses? (5 points)

because there is less reason to he about conhoversed Topeis

14. What conditions should be met to substitute a z-score in a confidence interval for means instead of a t-score? (6 points)

> normally dishibuted Sample size n≥40 population standard deviation is known

15. Write the Excel formula to find t-score for an 92% confidence interval. (5 points)

1-.92 = 0.08 = Alpha 0/2 = 0.04 = T. INV (0.04, N-1) Sample SIZE

16. What assumptions are made when using a two-sample pooled t-confidence interval? (4 points)

Independent Carpaired egnal variances

$$\sigma_{\widehat{x}} = \frac{\sigma}{\sqrt{n}}$$
  $\sigma_{\widehat{p}} = \sqrt{\frac{p(1-p)}{n}}$ 

$$\sigma_{\bar{x}} = \frac{\sigma}{\sqrt{n}}$$
  $\sigma_{\hat{p}} = \sqrt{\frac{p(1-p)}{n}}$   $s_{pooled} = \sqrt{\frac{(n_1-1)s_1^2 + (n_2-1)s_2^2}{n_1 + n_2 - 2}}$ 

$$S_{x_1-x_2} = S_{pooled} \sqrt{\frac{1}{n_1} + \frac{1}{n_2}}$$

Sample sizes: 
$$n > \hat{p}(1-\hat{p})\left(\frac{z_{\alpha/2}}{E}\right)^2$$
 
$$n > \left(\frac{z_{\alpha/2}\sigma}{E}\right)^2$$
 
$$m = n = \frac{4z_{\alpha/2}^2(\sigma_1^2 + \sigma_2^2)}{w^2}$$

$$n > \left(\frac{z_{\alpha/2}\sigma}{F}\right)^2$$

$$m = n = \frac{4Z_{\alpha/2}^2(\sigma_1^2 + \sigma_2^2)}{w^2}$$

Confidence intervals:

$$\bar{x} \pm t_{\alpha/2,n-1} \frac{s}{\sqrt{n}}$$

$$\hat{p} \pm z_{\alpha/2} \sqrt{\frac{\hat{p}(1-\hat{p})}{n}}$$

Two samples (independent): 
$$(\bar{x}_1 - \bar{x}_2) \pm t_{\alpha/2, n-1} \sqrt{\frac{s_1^2}{n_1} + \frac{s_2^2}{n_2}}$$
  $(\hat{p}_1 - \hat{p}_2) - z_{\alpha/2} \sqrt{\frac{\hat{p}_1(1-\hat{p}_1)}{n_1} + \frac{\hat{p}_2(1-\hat{p}_2)}{n_2}}$ 

$$(\hat{p}_1 - \hat{p}_2) - z_{\alpha/2} \sqrt{\frac{\hat{p}_1(1-\hat{p}_1)}{n_1} + \frac{\hat{p}_2(1-\hat{p}_2)}{n_2}}$$
